DIGITAL LITERACY PROJECT

Name: Anmol Panjwani

Reg No. :25BAI10354

Branch: BTech CSE With AI & ML

Year:2025-2029

Course Code:CSE0001

Date:25 March 2026

digital literacy

INTRODUCTION

In the modern digital age, digital literacy is an essential skill for students to use technology effectively and responsibly. This project focuses on developing awareness and practical digital skills through various activities. It includes creating a digital literacy infographic to promote safe online practices, building a student digital portfolio to showcase achievements, and designing a digital literacy awareness quiz to test knowledge. It also involves drafting a professional email to improve formal communication and creating a checklist of social media do’s and don’ts for responsible online behavior. Lastly, a case study on cybercrime awareness helps students understand online threats and safety measures, promoting safe and informed digital participation.

TASK 1

Infographic on Digital Literacy – Project Description

For this task, I created an infographic on digital literacy that highlights key aspects such as the meaning of digital literacy, useful digital tools for students, safe internet practices, maintaining a professional online presence, and proper email etiquette. The infographic was designed to present information in a clear, visually appealing, and easy-to-understand format to spread awareness effectively.

I used Canva as the primary tool to design the infographic, as it provides user-friendly templates, icons, and design elements that help in creating professional visuals. The use of colors, headings, and icons made the content more engaging and informative.

Through this activity, I learned the importance of presenting information visually and creatively. It also improved my understanding of digital responsibility and online safety. Overall, this task enhanced my creativity, design skills, and awareness of essential digital literacy concepts.

TASK 2

Building a Student Digital Portfolio – Overview

In this task, I created my digital portfolio using platforms like GitHub, LinkedIn, and Kaggle. Each platform was set up by creating a personal profile and adding important details such as my education, skills, and interests. On GitHub, I uploaded and organized my projects to showcase my technical work. LinkedIn was used to build a professional profile and connect with others, while Kaggle helped me explore data-related projects and learning opportunities. The main purpose of this task was to build a strong digital identity and present my work in a professional and structured manner. It also helps in improving visibility for future academic and career opportunities.

In the future, I plan to regularly update my portfolio by adding new projects, certifications, and achievements. I also aim to enhance my skills and expand my professional network, making my portfolio more effective and impactful.

TASK 3

GOOGLE Forms and Skill Development

In this project, I focused on improving my digital skills and creating awareness about digital literacy. I used platforms like HackerRank and Google Forms to complete practical tasks and apply my knowledge.

Firstly, I completed a Python Basic Skill Certification test on HackerRank. Through this, I practiced fundamental programming concepts such as variables, loops, functions, and problem-solving techniques. This helped me strengthen my coding skills and understand how to apply logic in real-world scenarios. After successfully completing the test, I uploaded the certificate as proof of my achievement.

Secondly, I created a Google Form on the topic of Digital Literacy Awareness. In this form, I designed questions related to safe internet practices, digital tools, and online behavior. This activity helped me learn how to collect responses, assign answers, and structure an interactive quiz.

Overall, this project enhanced both my technical and practical knowledge. I not only improved my programming skills but also learned how to create digital content for awareness and engagement

TASK 4

EMAIL AND DIGITAL AWARENESS

In this task, I worked on different communication scenarios to develop my formal writing and digital awareness skills. I wrote two formal emails: one to a professor requesting an extension for an assignment, and another to an internship coordinator expressing interest in summer internship opportunities. These tasks helped me understand the importance of tone, clarity, and proper structure in professional communication.

Additionally, I created a social media do’s and don’ts checklist to promote responsible online behavior. This activity focused on spreading awareness about safe and respectful digital interactions.

Through this task, I learned how to communicate effectively in formal situations and the importance of maintaining professionalism in both emails and social media platforms.

TASK 5

Project Report: Cybercrime Awareness

In this task, I explored the topic of cybercrime awareness, focusing on UPI and online payment fraud. I created a case study highlighting how such frauds occur and their impact on users. Additionally, I designed a prevention checklist titled "Stay Safe Online," which included practical steps to protect personal and financial information.

What surprised me the most was how easily people can fall victim to fraud through simple tactics like fake links or OTP scams. It showed how important awareness is in today's digital world.

One habit I will change is being more cautious while making online payments. I will always verify links, avoid sharing sensitive information, and stay alert to suspicious activities to ensure my online safety.

CONCLUSION

This digital literacy project helped me develop both creative and technical skills essential in today's digital world. In Task 1, I created an infographic on digital literacy, which improved my ability to present information visually and clearly. Through other tasks, I enhanced my programming knowledge by completing a Python certification and learned to use tools like Google Forms for creating quizzes. I also developed formal communication skills by writing professional emails. Additionally, working on cybercrime awareness and social media guidelines made me more responsible and cautious online. Overall, this project improved my digital skills, creativity, and confidence in using technology effectively
